1. Precautions

Follow these safety, servicing and ESD precautions to prevent damage and protect against potential hazards such as electrical shock and X-rays.

1-1 Safety Precautions

1. Be sure that all of the built-in protective devices are replaced. Restore any missing protective shields.
2. When reinstalling the chassis and its assemblies, be sure to restore all protective devices, including: nonmetallic control knobs and compartment covers.

3. Make sure that there are no cabinet openings through which people--particularly children--might insert fingers and contact dangerous voltages. Such openings include the spacing between the picture tube and the cabinet mask, excessively wide cabinet ventilation slots, and improperly fitted back covers.

If the measured resistance is less than 1.0 megohm or greater than 5.2 megohms, an abnormality exists that must be corrected before the unit is returned to the customer.

4. Leakage Current Hot Check (Figure 1-1):
Warning: Do not use an isolation transformer during this test. Use a leakage-current tester or a metering system that complies with American National Standards Institute (ANSI C101.1, *Leakage Current for Appliances*), and Underwriters Laboratories (UL Publication UL1410, 59.7).
5. With the unit completely reassembled, plug the AC line cord directly into the power outlet. With the unit's AC switch first in the ON position and then OFF, measure the current between a known earth ground (metal water pipe, conduit, etc.) and all exposed metal parts, including: antennas, handle brackets, metal cabinets, screwheads and control shafts. The current measured should not exceed 0.5 milliamp. Reverse the power-plug prongs in the AC outlet and repeat the test.

Fig. 1-1 AC Leakage Test

6. Antenna Cold Check:
With the unit's AC plug disconnected from the AC source, connect an electrical jumper across the two AC prongs. Connect one lead of the ohmmeter to an AC prong. Connect the other lead to the coaxial connector.
7. X-ray Limits:
The picture tube is especially designed to prohibit X-ray emissions. To ensure continued X-ray protection, replace the picture tube only with one that is the same type as the original. Carefully reinstall the picture tube shields and mounting hardware; these also provide X-ray protection.
8. High Voltage Limits:
High voltage must be measured each time servicing is done on the B+, horizontal deflection or high voltage circuits. Correct operation of the X-ray protection circuits must be reconfirmed whenever they are serviced. (X-ray protection circuits also may be called "horizontal disable" or "hold-down".)

Heed the high voltage limits. These include the *X-ray Protection Specifications Label*, and the *Product Safety and X-ray Warning Note* on the service data schematic.

1-1 Safety Precautions (Continued)

9. High voltage is maintained within specified limits by close-tolerance, safety-related components and adjustments. If the high voltage exceeds the specified limits, check each of the special components.
10. Design Alteration Warning:
Never alter or add to the mechanical or electrical design of this unit. Example: Do not add auxiliary audio or video connectors. Such alterations might create a safety hazard. Also, any design changes or additions will void the manufacturer's warranty.
11. Hot Chassis Warning:
Some TV receiver chassis are electrically connected directly to one conductor of the AC power cord. If an isolation transformer is not used, these units may be safely serviced only if the AC power plug is inserted so that the chassis is connected to the ground side of the AC source.

To confirm that the AC power plug is inserted correctly, do the following: Using an AC voltmeter, measure the voltage between the chassis and a known earth ground. If the reading is greater than 1.0V, remove the AC power plug, reverse its polarity and reinsert. Re-measure the voltage between the chassis and ground.
12. Some TV chassis are designed to operate with 85 volts AC between chassis and ground, *regardless of the AC plug polarity*. These units can be safely serviced *only* if an isolation transformer inserted between the receiver and the power source.
13. Some TV chassis have a secondary ground system in addition to the main chassis ground. This secondary ground system is not isolated from the AC power line. The two ground systems are electrically separated by insulating material that must not be defeated or altered.
14. Components, parts and wiring that appear to have overheated or that are otherwise damaged should be replaced with parts that meet the original specifications. Always determine the cause of damage or overheating, and correct any potential hazards.
15. Observe the original lead dress, especially near the following areas: Antenna wiring, sharp edges, and especially the AC and high voltage power supplies. Always inspect for pinched, out-of-place, or frayed wiring. Do not change the spacing between components and the printed circuit board. Check the AC power cord for damage. Make sure that leads and components do not touch thermally hot parts.
16. Picture Tube Implosion Warning:
The picture tube in this receiver employs "integral implosion" protection. To ensure continued implosion protection, make sure that the replacement picture tube is the same as the original.
17. Do not remove, install or handle the picture tube without first putting on shatterproof goggles equipped with side shields. Never handle the picture tube by its neck. Some "in-line" picture tubes are equipped with a permanently attached deflection yoke; do not try to remove such "permanently attached" yokes from the picture tube.
18. Product Safety Notice:
Some electrical and mechanical parts have special safety-related characteristics which might not be obvious from visual inspection. These safety features and the protection they give might be lost if the replacement component differs from the original—even if the replacement is rated for higher voltage, wattage, etc.

Components that are critical for safety are indicated in the circuit diagram by shading, () or (). Use replacement components that have the same ratings, especially for flame resistance and dielectric strength specifications. A replacement part that does not have the same safety characteristics as the original might create shock, fire or other hazards.

1-2 Servicing Precautions

WARNING1: First read the "Safety Precautions" section of this manual. If some unforeseen circumstance creates a conflict between the servicing and safety precautions, always follow the safety precautions.

WARNING2: An electrolytic capacitor installed with the wrong polarity might explode.

1. Servicing precautions are printed on the cabinet. Follow them.
2. Always unplug the unit's AC power cord from the AC power source before attempting to: (a) Remove or reinstall any component or assembly, (b) Disconnect an electrical plug or connector, (c) Connect a test component in parallel with an electrolytic capacitor.
3. Some components are raised above the printed circuit board for safety. An insulation tube or tape is sometimes used. The internal wiring is sometimes clamped to prevent contact with thermally hot components. Reinstall all such elements to their original position.
4. After servicing, always check that the screws, components and wiring have been correctly reinstalled. Make sure that the portion around the serviced part has not been damaged.
5. Check the insulation between the blades of the AC plug and accessible conductive parts (examples: metal panels, input terminals and earphone jacks).
6. Insulation Checking Procedure: Disconnect the power cord from the AC source and turn the power switch ON. Connect an insulation resistance meter (500V) to the blades of the AC plug.

The insulation resistance between each blade of the AC plug and accessible conductive parts (see above) should be greater than 1 megohm.
7. Never defeat any of the B+ voltage interlocks. Do not apply AC power to the unit (or any of its assemblies) unless all solid-state heat sinks are correctly installed.
8. Always connect a test instrument's ground lead to the instrument chassis ground *before* connecting the positive lead; always remove the instrument's ground lead last.

1-3 Precautions for Electrostatically Sensitive Devices (ESDs)

1. Some semiconductor ("solid state") devices are easily damaged by static electricity. Such components are called Electrostatically Sensitive Devices (ESDs); examples include integrated circuits and some field-effect transistors. The following techniques will reduce the occurrence of component damage caused by static electricity.
2. Immediately before handling any semiconductor components or assemblies, drain the electrostatic charge from your body by touching a known earth ground. Alternatively, wear a discharging wrist-strap device. (Be sure to remove it prior to applying power--this is an electric shock precaution.)
3. After removing an ESD-equipped assembly, place it on a conductive surface such as aluminum foil to prevent accumulation of electrostatic charge.
4. Do not use freon-propelled chemicals. These can generate electrical charges that damage ESDs.
5. Use only a grounded-tip soldering iron when soldering or unsoldering ESDs.
6. Use only an anti-static solder removal device. Many solder removal devices are not rated as "anti-static"; these can accumulate sufficient electrical charge to damage ESDs.
7. Do not remove a replacement ESD from its protective package until you are ready to install it. Most replacement ESDs are packaged with leads that are electrically shorted together by conductive foam, aluminum foil or other conductive materials.
8. Immediately before removing the protective material from the leads of a replacement ESD, touch the protective material to the chassis or circuit assembly into which the device will be installed.
9. Minimize body motions when handling unpackaged replacement ESDs. Motions such as brushing clothes together, or lifting a foot from a carpeted floor can generate enough static electricity to damage an ESD.

MEMO

4. Disassembly and Reassembly

4-1 Screen Replacement for SPT521J/PCH521R

1. Remove 3 screws located on the bottom of the bottom cabinet.
Pull the cabinet-bottom forward to remove it from the mainframe.

2. Remove the 4 screws holding the door assembly.
Remove the 4 screws located below the front mask.

3. Lift and remove the front mask.

4. Remove the bracket and replace the screen.

5. Repeat the sequence in reverse order to reassemble.

4-2 Screen Replacement for SPT431J

1. Remove 3 screws located on the bottom of the cover grill.
Pull the grill cover forward to remove it from the mainframe.

2. Remove 4 screws holding the door assembly.

3. Push the door assembly inside and lay it on the mainframe.

4. Remove 4 screws located below the front mask.

5. Lift and remove the front mask.

6. Remove the bracket and replace the screen.

7. Repeat the sequence in reverse order to reassemble.

4-3 CRT Assembly Replacement

1. Remove the mask-front (same procedure as screen replacement).
2. Remove the CRT PCB. Separate the connector from the CRT assembly.
3. Remove 4 screws holding the CRT assembly. Lift up and remove.
4. Position the CRT assembly. Align it with into the hole on the Main CRT Bracket.

Fig. 4-1 Replacement of CRT Assembly

5. Alignment and Adjustments

5-1 I²C Bus Data Adjustment

1. Turn power On. Select STANDARD .
2. Turn power Off. Enter Standby.
3. Press MUTE - 1 - 8 - 2 - POWER ON to enter the Service Mode.

5-1-1 The following will appear on screen:

M01	V-POSI	38	10	M01 V-POSI : option 38 : data 10 : channel
-----	--------	----	----	--

5-1-2 Service Mode Controls

Channel UP/DOWN	Select channel
Volume UP/DOWN	Select adjusting menu
Menu	Increase data number
Mute	Decrease data number
TV/Video	Select TV or Video
Add	Exit the Service Mode after memorizing the adjusted data
Erase	Erase the adjusted data and return to the pre-adjusted data

1. When replacing IC902 EEPROM, keep power ON for 4 to 5 minutes (writing time for EEPROM initial data) after plugging in the EEPROM.
2. After replacing IC902 EEPROM, enter the Service Mode and input standard data for all items before adjusting GEOMETRIC, WHITE BALANCE, SUB-CONTRAST, and SUB-BRIGHTNESS.

5-1-3 I²C Data

Table 5-1 I ² C Data				
No.	Function	Range	Initial Value

5-2 Video Adjustment

5-2-1 AGC (Automatic Gain Control) Adjustment

1. Input a PHILIPS pattern (70dB or higher).
2. Select a mode using the receiver.
(LNA is not used)
3. Adjust VR202 (IF/MTS-M001) of Main PCB until snow (noise) disappears from the screen.
4. Repeat 1 ~ 3 for other patterns.

5-2-2 Video Level Adjustment

1. Input a 100% white color bar pattern.
2. Select Channel UP/DOWN keys.
3. Check MONITOR OUT with an oscilloscope (0.5V/div).
4. Adjust the VR201 for a video level of 1.8Vp-p.

5-2-3 Screen Adjustment

1. Warm up the set at least for 30 minutes.
2. Turn to the VIDEO mode using a receiver (Video = No signal).
3. Connect the scope for cathode voltage adjustment to RK, GK, BK of CRT-PCB Ass'y alternatively (GT506, GT536, GT566).
4. Adjust Screen-VR (VR502, VR532, GT562) so that the voltage of sync is 20Vp-p.

5-2-4 White Balance Adjustment

1. Select STANDARD from the menu.
2. Input 100% white pattern.
3. In power standby, set up the receiver by pressing MUTE - 1 - 8 - 2 - POWER ON.

4. Warm up the set at least for 30 minutes.
5. Input a 10-step stair signal.
6. Select B-BIAS and G-BIAS using Volume UP/DOWN.
7. Adjust low-light while checking the dark part of the screen.
8. Select G-DRIVE and B-DRIVE using Volume UP/DOWN.
9. Adjust high-light while checking the bright part of the screen.
10. Repeat 6 ~ 9 and the screen adjustments, if necessary.
11. Press the ADD button.

5-2-5 Sub-Brightness Adjustment

1. In power standby, set up the receiver by pressing MUTE - 1 - 8 - 2 - POWER ON.
2. Select SUB BRIGHT using Channel UP/DOWN.
3. Select M28 S-BRIT using Volume UP/DOWN.
4. Adjust MENU or MUTE until the 7th step on the right side of the screen disappears.
5. Press the ADD button.

5-2-6 Sub-Contrast Adjustment

1. Select STANDARD from the menu.
2. Input a crosshatch pattern.
3. Connect a digital multimeter to TP405(X) and TP406(Y) on deflection board.
4. In power standby, set up the receiver by pressing MUTE - 1 - 8 - 2 - POWER ON.
5. Input a crosshatch pattern using Channel UP/DOWN.
6. Select M25 S-CONT using volume UP/DOWN.
7. Adjust the digital multimeter for 0.7V using MENU or MUTE.
8. Press the ADD button.

5-3 Deflection Adjustment

5-3-1 FBT B+ Voltage Adjustment

PREPARATION

1. Input a lion head pattern.
2. Select STANDARD from the menu.
3. Warm up the set at least for 10 minutes.
4. Adjust ABL.

ADJUSTMENT

1. Connect a multimeter to GT401(B⁺) and GT402(GND) on deflection board.
2. Adjust VR401(HV ADJ) on deflection board so that the multimeter indicates 125VDC. (Input the lion head pattern signal)

5-3-2 Failsafe Adjustment

1. Failsafe adjustment is necessary whenever servicing is done.
2. Turn power switch ON and select STANDARD from the menu.
3. Temporarily short R474, R473 (GT403, GT404) on deflection board. Picture and sound will disappear.
4. The TV remains in this state even after removing the short terminal. This shows that the failsafe circuit is working properly.
5. To restore normal picture and sound, temporarily turn off the TV and switch power on at least in 30 seconds.

5-4 Convergence Adjustment

5-4-1 Lens Focus and Static Focus Adjustment

5-4-1(A) LENS FOCUS ADJUSTMENT

PREPARATION

1. Select STANDARD video mode. (Contrast: 64, Brightness: 32)
2. Input a crosshatch pattern.
3. Do this adjustment after the static focus adjustment.
4. Do this adjustment after DY tilt adjustment.

ADJUSTMENT

1. Loosen the lens screws.
2. Cover the lenses that are not being adjusted.
3. Adjust the lens, observing the chromatic aberration vertically and horizontally, within +/-3 blocks of the center of the cross hatch pattern.
4. When the lens is turned clockwise, the chromatic aberration will change as follows:

Lens	Chromatic Aberration Change
R	Orange - Crimson
G	Blue - Red
B	Purple - Green

5. **Green lens adjustment:**
Set the lens at the point where Blue just changes to Red. If the chromatic aberration is irregular throughout the picture screen, adjust the lens to show Red within ± 3 blocks around the horizontal center-line (1~3MM area). If the aberration is irregular, adjust the lens as shown in the diagram below. (Accurate alignment of Green is important for overall color quality.)
6. **Red lens adjustment:**
Set the lens at the point where Orange becomes Crimson.
7. **Blue lens adjustment:**
Set the lens at the point where Purple becomes Green.

5-4-2 Static Focus (Electric Focus)

PREPARATION

1. Select STANDARD video mode.
2. Input a crosshatch pattern.
3. Cover the lenses that are not being adjusted.
4. Connect a convergence jig and read data.

ADJUSTMENT

Vary the focus pack VR (Red, Blue) on the front cabinet. Adjust the TV for the best possible focus around the center of the crosshatch pattern, without losing overall screen balance.

Examine these points together

5-4-3 Horizontal Dynamic Focus Adjustment

PREPARATION

1. A horizontal dynamic focus adjustment should be done before the convergence adjustments.
2. Input a crosshatch pattern.
3. Select STANDARD video mode.
4. Adjust the Green lens and cover the Red and Blue lenses.

ADJUSTMENT

Adjust VRZ01 (located on the convergence board). Balance the left and right sides of the dynamic focus lines.

Examine the left and right sides together

5-4-4 Convergence Module Adjustment

1. IFT adjustment:

Check T2 waveform using V-SYNC rate.
Adjust IFT for 2.0V of DC. (See the diagram below)

2. VR adjustment

Check T1 waveform using H-SYNC rate.
Adjust VR for symmetrical waveform. (See the diagram below.)

5-4-5 Convergence Adjustment

1. Warm up the set at least 30 minutes.
2. Display the test pattern by pressing the remote-control keys in this sequence:
MUTE - 1 - 8 - 3.
3. After selecting R-Mute and B-Mute, display only a Green Pattern. Center the pattern by adjusting the center magnet on DY (Green DY).
4. After removing the static convergence connector CNZ03 from the convergence AMP board, select G-Mute and B-Mute. Display only a Red Pattern and center the pattern by adjusting the center magnet on DY (Red DY).
5. Center the Blue Pattern as above.
6. After 1~5 adjustments are completed, begin the convergence adjustments. First, display only Green and do the Green convergence adjustment.
7. Connect the static convergence post head (CN203) to the static connector.
8. After selecting a button on the front control, confirm Red and Blue to Green.
9. Press the R-Mute key.
10. Press the B-Conv key.
11. After the Blue Convergence Adjustment is completed, press the Save key.
12. Press the B-Mute key.
13. Press the R-Conv key.
14. After the adjustments are completed, display Red, Blue, and Green.
15. Readjust if necessary.

5-4-6 Remote Control for Servicing

5-4-7 SPT431J JIG Screen

5-4-8 SPT521J/PCH521R JIG Screen

5-4-9 Convergence Adjustment Manual

5-4-10(a) FUNCTION

1. Convergence Mode

Display the test pattern by pressing the remote control keys in this sequence:
Mute - 1 - 8 - 3.

2. Cursor Move

Cursor Direction Select Button (H/V Cursor)

Press to move the cursor horizontal or vertical (by pressing it in order)
(See below)

After selecting the cursor move button, press the F-Cursor Button and B-Cursor Button
(See below)

3. Convergence Picture Move Button

Use the Channel and Volume keys to move the cursor.
(Continuous, Normal) The pattern looks like this:

< HORIZONTAL >

< VERTICAL >

4. Normal/Test Picture Button

Press to see the normal picture during test pattern adjustment.

< TEST PICTURE >

< NORMAL PICTURE >

5. Coarse/Fine Select Button

Coarse: Press to interpolate data by position the cursor 5 point in width and 5 point in length and moving the data up/down/left/right.

Fine: Press to move data up/down/left/right only on the position of cursor

6. Line Shift

< HORIZONTAL/LINE SHIFT >

< VERTICAL/LINE SHIFT >

7. Cancel

Press to return to the previous data

8. Save

After convergence adjustments are completed, press to save data.

9. Exit :

After convergence adjustments are saved, press to return to the normal picture

MEMO

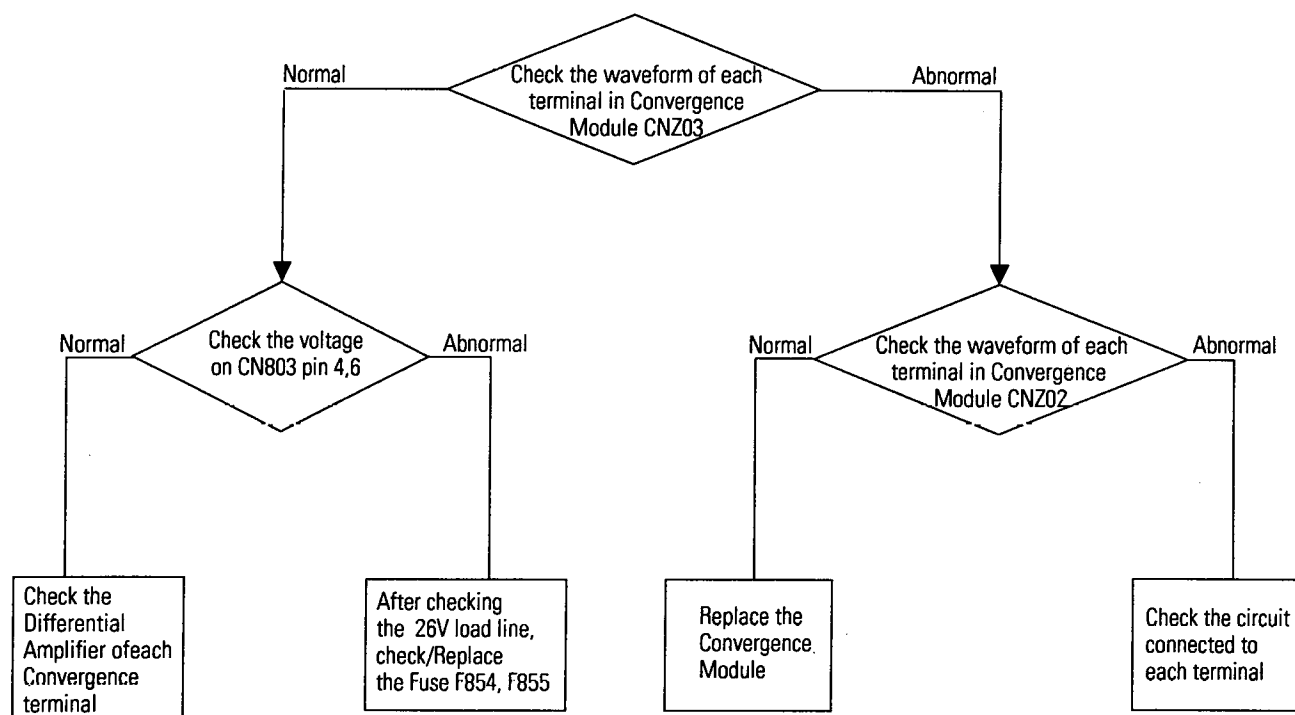

6. Troubleshooting

6-1 Protector

Note : When the vertical and horizontal deflection circuits do not operate, the TV set will be switched off while HV protector operates.

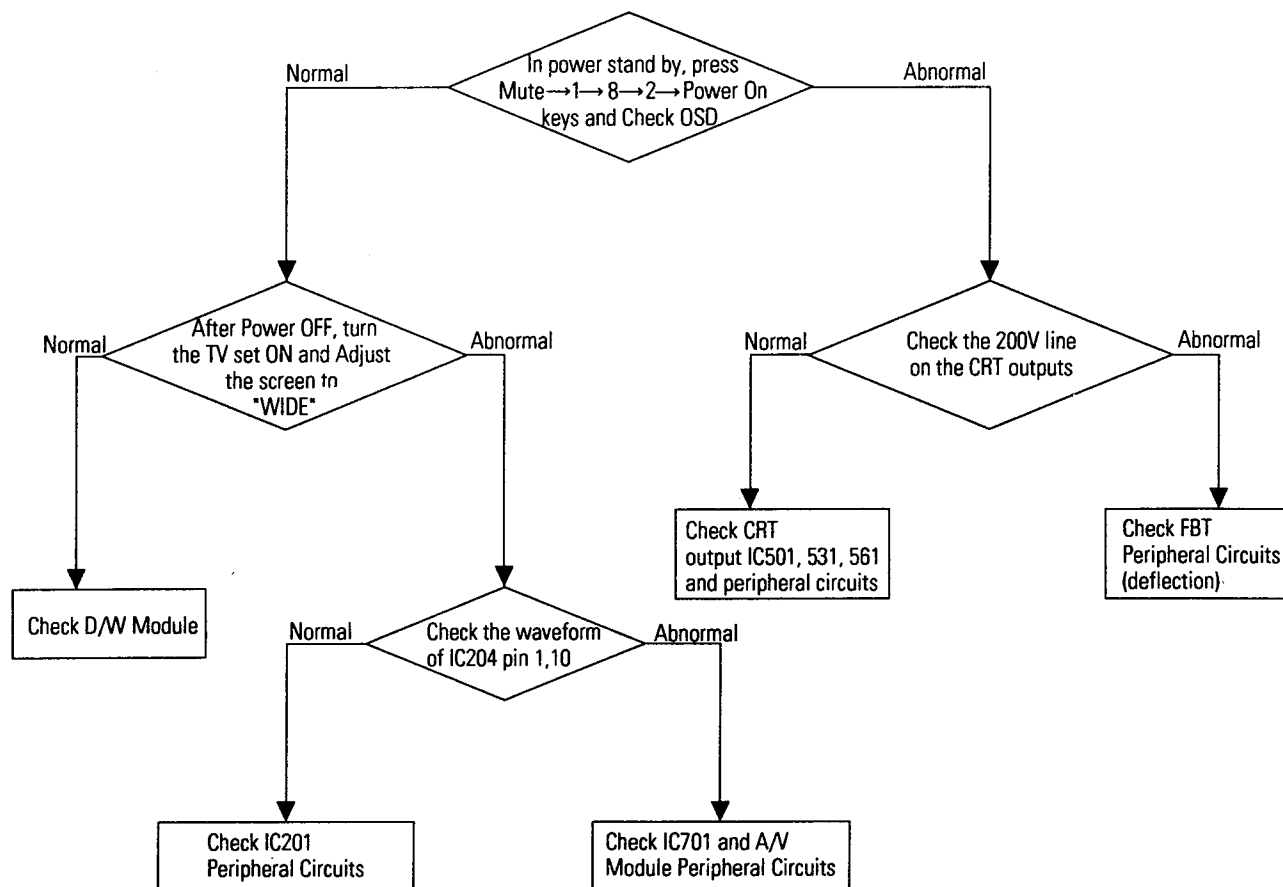

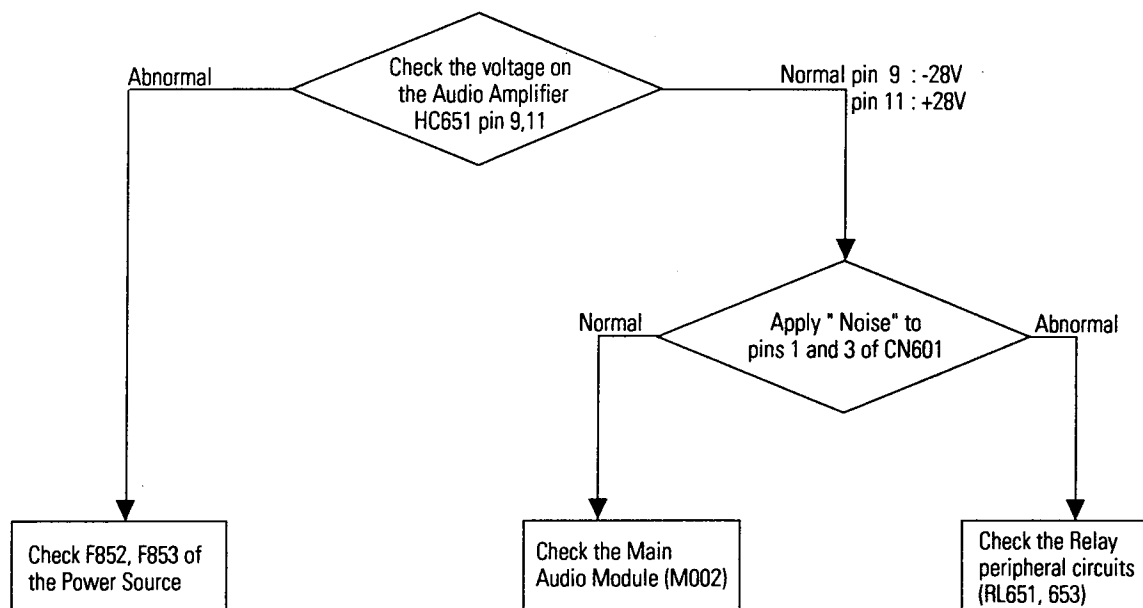

6-2 Convergence Misaligned

6-3 No Picture (Raster and Sound Ok)

Note : When Sound Control IC and Video/Audio Switching IC (IC701) are abnormal, the detective IC can be identified (on SCREEN) by pressing Mute → 1 → 8 → 2 → Power ON.

6-4 No Sound (Picture OK)

MEMO
